

Covid-19 Case Study 1- Assessment, Communication and protection

Title	Assessment, Communication and Protection (CoV-19)
Healthcare Team	Nurses and Physicians
<b>General Medical Unit (not Covid-19 unit)</b>	
Client	Adult
Department	General Medical Unit (not Covid-19 unit)
Client Information	Name: Rose Morin Gender: female Age: 67 years Weight: 154 lb (70 kg) Height: 168 cm (5'5") Allergies: None Immunizations: influenza vaccine yearly
Medical History	<u>Antecedent</u> Type 2 Diabetes 5 years  <u>Reason for consultation</u> Client had difficulty controlling her glyceimic levels for a couple of weeks. She was admitted for diabetic acidosis. Her health status is normal as of yesterday. Her insulin levels have been normal for 24 hours. Subcutaneous insulin levels have been adjusted.  <u>Psychosocial Profile</u> Teacher married with one child.
Date	Tuesday March 6, 2020
Resume	The scenario starts in a general medical unit at the hospital. Rose, a 67-year-old woman, has been admitted for three days because of uncontrolled diabetes. The initial Covid-19 assessment screening questionnaire during admission indicated there was no need for a Covid-19 swab/test. <u>No isolation was needed.</u>  <u>8:30 a.m.</u> Glyceimic levels have been stable for 24 hours and the nurse is doing her morning rounds and health assessment of her client. Rose just finished her breakfast. The nurse asks to take her vital signs. Rose mentions that she had a little bit of diarrhea this morning and is not feeling very well.
Vital Signs	- HR: 84 - Resp: 22 - BP: 136/72 mmHg

## Covid-19 Case Study 1- Assessment, Communication and protection

	<ul style="list-style-type: none"> <li>- SpO<sub>2</sub>: 96%</li> <li>- Temp: 38.8 °C</li> </ul>
Learning Objectives	<ul style="list-style-type: none"> <li>- Identify possible Covid-19 clinical manifestations during general health assessment.</li> <li>- Assess the client according to a suspected COVID-19 risk.</li> <li>- Collaborate with the interdisciplinary team.</li> <li>- Apply independent and collective protective interventions in a risk context of a suspected Covid-19 client.</li> </ul>
Clinical Manifestations	<ul style="list-style-type: none"> <li>- Diarrhea since the morning</li> <li>- Temp: 38.8 °C</li> <li>- Feeling unwell</li> </ul>
