DEMO DOSE®
SIMULATED MEDICATION FOR EDUCATION™

The Market Leader in Simulated Medications

Demo Dose® is a Pocket Nurse® brand of simulated medications, designed to look real but consisting of inert ingredients with no active pharmaceutical elements. Demo Dose® simulated medications are for educational use only, and not for human or animal use. Demo Dose® products are an indispensable tool for teaching medication management and play an important role in a wide range of medical simulations.

Types of Simulated Medications and Medication Administration

Training Tools include:

- Analgesics
- Anti-Alzheimer's
- Antiarrhythmics
- Antibiotics
- Antidepressants
- Antidiabetics
- Antihistamines
- Anxiolytics
- Bronchodilators
- Code Drugs
- Compounding Bases
- Corticosteroids
- Hypnotics
- Inject-Ed™ Injection Trainer
- IV Medications
- Laxatives
- NSAIDs
- Nutritional Supplements
- Opioids
- Suppositories
- Total Parenteral Nutrition (TPN)
- Vasodilators
- Much more

Helping to distinguish them from real medications, Demo Dose® simulated medications misspell the medication name that they simulate — typically by omitting the final vowel of the generic name. Simulations allow for ongoing education and practice in a safe and controlled environment, thereby eliminating the risk to real patients. Demo Dose® labels clearly state, "For instructional use only," and emphasize "Not for human or animal use."

For instructional use only. Not for human or animal use.
